SOLAR ENERGY MAKING ULTRA-GREEN HOMES OF THE FUTURE A MODERN DAY REALITY

MORE CLEAN ELECTRICITY TO HOMEOWNERS

PARIS - SAN JOSE, 17.11.2015, 18:13 Time

USPA NEWS - According to a report by McGraw Hill Construction, nearly one-third of new single-family homes in the United States will be green by 2016. They are energy and natural resource efficient, designed to reduce overall impact on human health and the environment...

According to a report by McGraw Hill Construction, nearly one-third of new single-family homes in the United States will be green by 2016. They are energy and natural resource efficient, designed to reduce overall impact on human health and the environment.

An increased number of consumers are going a step further and striving for net-zero energy homes that use renewable energy solutions, such as solar power systems, to offset all or most of their energy consumption. Across the country, the number of net-zero energy residential and commercial buildings doubled between 2012 and 2014 as cited by the New Buildings Institute.

Experts predict the trend will continue. This is partly because reliable solar has become more accessible and affordable than ever, delivering dramatic energy savings to customers. The Solar Energy Industries Association reports that since 2006, the price to install solar has plummeted by more than 70 percent, and innovative technologies are making solar panels increasingly more efficient. Today there are close to one million solar energy systems operating in the U.S., which in terms of reduced carbon emissions is the equivalent of taking 5.4 million vehicles off the road each year.

In Washington D.C. this week at Greenbuild, the world's largest conference and expo dedicated to green building, SunPower will offer an inside look at what will be the industry's first turn-key home solar energy solution that is wholly designed and built by one manufacturer. It is scheduled to be available to U.S. customers in 2016.

While most companies offer conventional solar systems made with parts from various manufacturers, customers can trust that every major component of a SunPower solar system is created by SunPower and designed to work seamlessly together, from high efficiency solar cells, to panels, to mounting hardware, to monitoring software.

Tom Werner, president and CEO of SunPower, points out that all solar energy systems are not created equal. It's important to research what type of panels and inverters are offered by local installers.

'There is no denying that solar power is now mainstream, and for 30 years we've helped SunPower customers stay well ahead of the energy curve with high efficiency solar solutions that deliver clean electricity and significant energy savings,' said Tom Werner.
